Refer to the Installation and Setup Guide for detailed information on programming the LYNXR-I system. The Installation and Setup Guide includes full descriptions of all data fields.

UL **LYNXR-I is not intended for UL985 Household Fire applications unless a 24-hour backup battery (P/N LYNXRCHKIT-HC or LYNXRCHKIT-SHA) is installed.**

TO ENTER PROGRAMMING MODE:

1. Power up, then depress **[✻] and [#]** both at once, within 50 seconds of powering up.
   OR
2. For factory defaulted system, enter: **Installer Code** (**4 + 1 + 1 + 2)** plus **8 + 0 + 0.** OR
   If different **Installer Code** is programmed, enter: **New Installer Code + 8 + 0 + 0.**
   (if ✻98 was used to exit previously, method 1 above must be used to enter the program mode again)
3. Upon entry into Program mode, data field ✻20 will be displayed (the first data field in the system) and both keypad LEDs will flash.

TO PROGRAM THE DATA FIELDS:

1. Press [✻] followed by the desired field number (e.g., ✻21), then make the required entry.
2. The keypad beeps three times after entering data, then displays the next data field in sequence.
3. For phone number and account number fields, press [✻] to end the entry if less than number maximum number of digits is entered.
4. To delete an entry, simply press [✻] plus that field number and reenter the correct data. For phone number and account number fields ✻40-✻44, ✻88 and ✻94, press [✻] + field number + [✻].

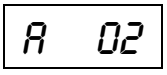
✻56 ENHANCED ZONE PROGRAMMING PROCEDURE

Use this mode to program zone information. Press ✻56 while in programming mode.

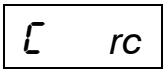
Notes: (1) Entering a number other than the one specified may give unpredictable results.
(2) You may find it convenient to adjust the volume setting before entering the Programming Mode. This will allow you to clearly hear feedback announcements or system beeps.



ZONE NUMBER
Enter the 2-digit zone number to be programmed. The system will announce the Voice Descriptor for the selected zone, if it is programmed.
[✻] = Continue
00 = exit zone programming mode; upon exiting, the prompt "56" blinks; press
[✻] + any field number to go to that field.

- Zones 2-25 = RF transmitter zones (only)
- Zone 26-41 = RF button zones (only)
- Zone 92 = Duress
- Zone 95, 96, 99 = Panic zones

ZONE TYPE
Enter the 2-digit zone type (*zt*) for this zone (see table of zone types on worksheet).
[✻] = Continue [if 00 is entered the system will skip to DELETE ZONE PARAMETERS prompt (F)].
[#] = Return to previous prompt



REPORT CODE
Enter the report code (*rc*) for this zone.
Report consists of 2 hexadecimal digits, each composed of 2 numerical digits (A = 10, B = 11, C = 12, D = 13, E = 14, F = 15; see Report Code description for explanation of codes). [✻] = Continue; If this is zone 95, 96 or 99, the system skips to the VOICE DESCRIPTOR prompt (1C)
[#] = Return to previous prompt

INPUT TYPE
Enter the input type (*i*) for the transmitter assigned to this zone as follows:
3 = Supervised RF (RF)
4 = Unsupervised RF (UR)
5 = Button type (BR)
[✻] = Continue
[#] = Return to previous prompt

Note
Zones 2-25 should be assigned as Input Type 3 or 4 and Zones 26-41 should be assigned as Type 5 only.

LOOP NUMBER or LOOP AND SERIAL NUMBER (if using RF Learning)

Note: It is not necessary to manually enter a Loop Number if using the RF Learning Mode.

RF Learning - Two (2) transmissions (two key depressions at least five seconds apart) will be required for BR type devices (device type 5). Two beeps will sound after the second transmission, confirming that the loop number and serial number have been learned.
For all other device types, four (4) transmissions are required (fault, restore and fault, restore). A single beep will sound after the second transmission confirming that the loop and serial number have been captured. Following the fourth transmission the system will confirm that the loop and serial number have been learned by announcing the Voice Descriptor for the zone, if it is programmed, followed by two beeps.

Note: BR type devices cannot be enrolled by using UR or RF type. Likewise, UR or RF type devices cannot be enrolled by using a BR type device. There is a 52-second time-out for RF enrolling. At the end of the time-out, the system returns to the INPUT TYPE prompt (d). If enrolled, loop number and "L" are displayed.

Manual Entry - Enter the desired loop number and press [✻] to continue (see the transmitter's Installation Instructions for specific loop designations). If "L" is displayed the zone's serial number has already been enrolled.

Note: The loop number can be changed even if the zone has already been entered. Care should be taken when using this feature as it has the capability to make zones inoperable by creating a mismatch of a working serial number/loop number combination. This should be re-confirmed if the loop number is changed.

0 + [✻] = to Delete Serial Number prompt (F)
[✻] = Continue to the ENROLL MODE prompt (1A) if not enrolled, or VOICE DESCRIPTOR prompt (1C) if already enrolled.
[#] = Return to previous prompt

1-4 = Loop number for the zone of the transmitter being entered or learned

✻56 ENHANCED ZONE PROGRAMMING PROCEDURE

DELETE ZONE PARAMETERS
0 = Discard the delete request.
1 = Confirm the requested delete.
If 00 is entered in the zone type, confirmation of the delete request will delete all information associated with zone currently being programmed.

If 0 is entered in the loop number, confirmation of the delete request will delete the serial number associated with zone currently being programmed.

Note: 00 was entered as a zone type in prompt (b), 00 will be retained and system will advance to prompt (1C).

1A LC

ENROLL MODE
0 = Skip to the VOICE DESCRIPTOR prompt (1C). If zone type is "00," then skips to DELETE SERIAL NUMBER prompt instead.
1 = Enroll now and proceed to SERIAL NUMBER prompt (1b) (If "L" is not displayed).
2 = Copy the last serial number from the local memory buffer (If "L" is not displayed).
3 = View existing serial number. (Only if "L" is displayed).
9 = Delete existing serial number. (Only if "L" is displayed).
[✻] = Advance to the VOICE DESCRIPTOR prompt (1C). This will save all zone parameters.
[#] = Return to the loop number prompt (E).

Notes: (1) "L" will be displayed only if transmitter was already learned.
(2) The system will announce the Voice Descriptor for the selected zone, if it is programmed, followed by three beeps and "C" will be displayed only after confirmation.

1b

SERIAL NUMBER
Manually enter the transmitter's 7-digit serial number (printed on the transmitter). If an incorrect digit is entered, press the [#] key to return to prompt (1A).

Note: In order for all parameters to be accepted, you must advance to prompt (1C).

When all 7 digits are entered, press the [✻] key. The serial number will be copied into EEROM and the local memory buffer and the system will return to the (1A) prompt and "L" will be displayed. If 52 seconds pass and no entry is been made, the system will return to prompt (1A).

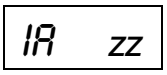
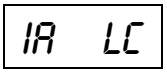
[✻] = Continue; system searches for zones not yet entered, (for zones 2 to 25 a zone type must be entered) then advances to ENROLL SERIAL NUMBER prompt (1b).
00 = Exit Sequential mode, upon which the prompt "83" blinks.

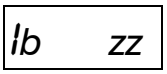




ENROLL MODE
0 = Advance to next unlearned zone.
1 = Enter now and proceed to SERIAL NUMER prompt (1b). For 4-button keys (zones 26-29, 30-33, 34-37 and 38-41) the serial number will be learned to all four buttons.
2 = copy the previous serial number entry from the buffer.

Note: Before you can copy a serial number you must first enter a serial number. If no serial is stored in the buffer and a copy is attempted the panel will emit a long beep indicating an invalid operation.

3 = View existing serial number. (Only if "L" is displayed. If "L" is not displayed, panel will emit a long beep. Each digit will be displayed and the keypad will beep once for digits 1-6 and three times for last digit.
4 = Copy the 4-button key template set for zones 26 - 29 (includes all zone parameters except serial numbers). Only valid on 4-button key zones 30-33, 34-37 and 38-41 that do not have serial numbers learned. (Template acceptance is indicated by two beeps after copying. A single long beep emitted when copying templates indicates the template is not valid.)
9 = Delete existing serial number. Go to the (1A) prompt. (For 4-button key zones 26-29, 30-33, 34-37 and 38-41, deletes all four at once.)
[✻] = Advance to the next unlearned zone.
[#] = Return to previous prompt (1A).



SERIAL NUMBER
This prompt can be used to enroll the transmitter serial number via RF transmission or manually.
RF Learning - Two (2) transmissions (two key depressions at least five second apart) will be required for BR type or four (4) transmissions (fault, restore and fault, restore) for UR or RF type. BR type devices can be enrolled only by transmission from BR devices. Likewise, UR and RF devices can only be enrolled by transmission from a UR or RF device.
If the learned serial number has a different loop number than that entered in ✻56 the system will announce the Voice Descriptor, if it is programmed, followed by two beeps and will return to Prompt (1A) and "L" will be displayed.

If the loop number captured by RF transmission and that entered in ✻56 mode match, the system will announce the Voice Descriptor, if it is programmed, followed by three beeps and return to Prompt (1A) and "LC" will be displayed. No additional transmissions are needed for confirmation.

Manual Entry - Enter the 7-digit serial number printed on the transmitter. If you enter an incorrect digit, press the [#] key to backup to prompt (1A) and start over. When all 7 digits are entered, press the [✻] key. If less than 7 digits are entered, the keypad will emit a single long beep and return to the (1A) prompt without displaying the "L". If more than 7 digits have been entered, the first 6 digits will be saved along with the last digit that was entered (entering 123456789 yields the serial number 1234569).

Note: If 52 seconds passes and no entry has been made, the system returns to prompt (1A).

DELETE ZONE PARAMETERS CONFIRMATION
0 = Discard the delete request.
1 = Confirm requested delete.
